

## Measuring Angles

G-AAD 1

**Instructions:** Use a protractor to measure how many degrees each angle is. If you don't have a protractor, then just estimate and see how close you got.

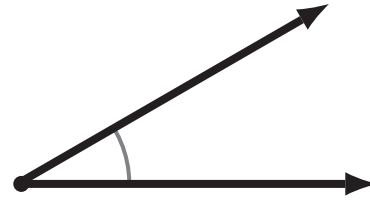

1

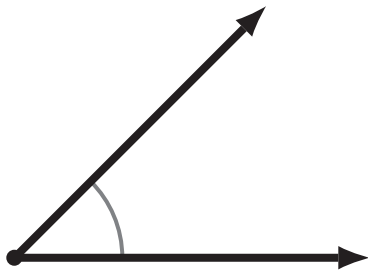

15°

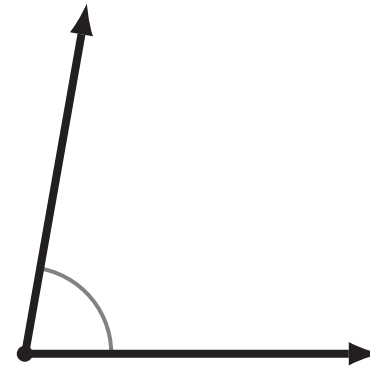

2

3

4

5

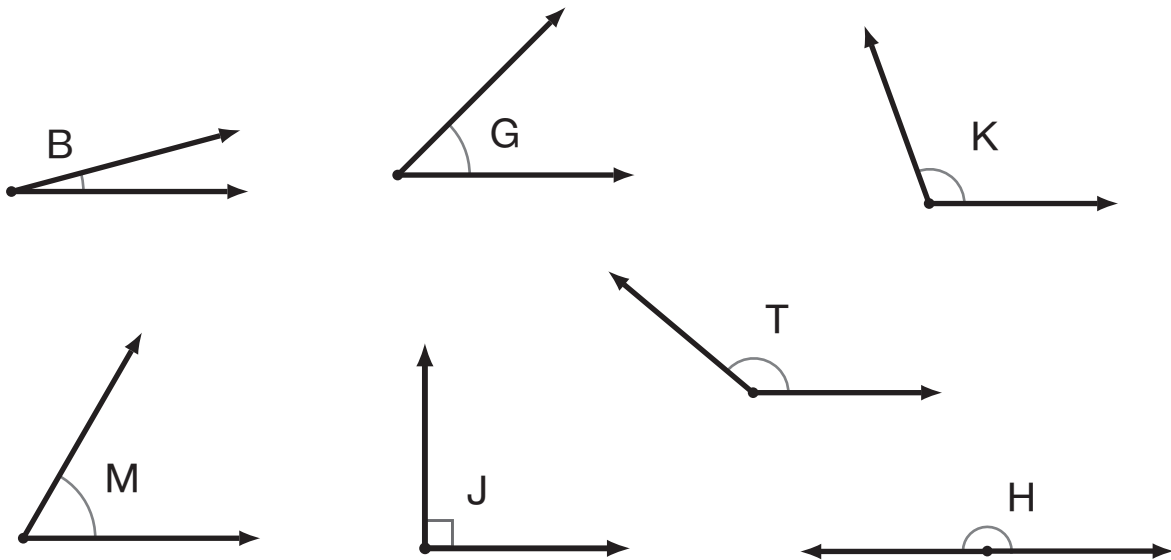

6

## Comparing Angles

G-AAD 2

**Instructions:** Use the greater-than '>' and less-than '<' signs to compare these angles. (If you have trouble comparing the angles visually, you can use a protractor to measure them.)

1  $\angle B < \angle G$

2  $\angle J \bigcirc \angle G$

3  $\angle M \bigcirc \angle B$

4  $\angle T \bigcirc \angle H$

5  $\angle J \bigcirc \angle K$

6  $\angle J \bigcirc \angle H$

7  $\angle T \bigcirc \angle M$

8  $\angle K \bigcirc \angle G$

9  $\angle G \bigcirc \angle M$

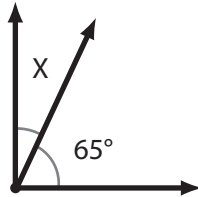

10  $\angle T \bigcirc \angle K$

## Finding an Unknown Angle

G-AAD 3

**Instructions:** For each set of complementary or supplementary angles, find the unknown angle (X).

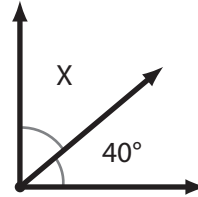

1

$m\angle X = \underline{25^\circ}$

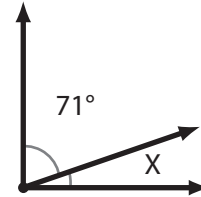

$$\begin{array}{r} 90 \\ - 65 \\ \hline 25 \end{array}$$

2

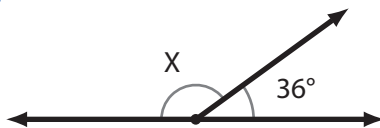

$m\angle X = \underline{\hspace{2cm}}$

3

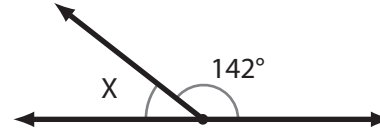

$m\angle X = \underline{\hspace{2cm}}$

4

$m\angle X = \underline{\hspace{2cm}}$

5

$m\angle X = \underline{\hspace{2cm}}$

6

$m\angle X = \underline{\hspace{2cm}}$

7

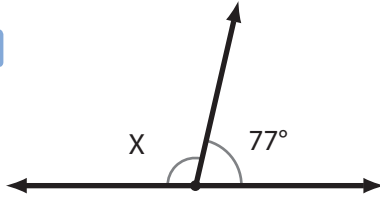

$m\angle X = \underline{\hspace{2cm}}$

## Finding an Unknown Angle - Set 2

G-AAD 4

**Instructions:** For each set of complementary or supplementary angles, find the unknown angle (X).

1

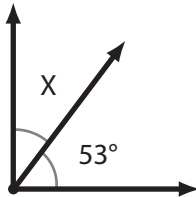

$m\angle X = \underline{\hspace{2cm}}$

2

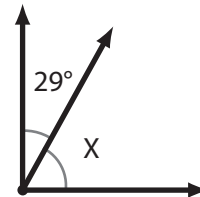

$m\angle X = \underline{\hspace{2cm}}$

3

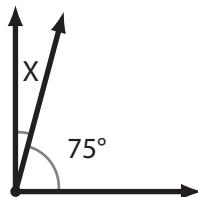

$m\angle X = \underline{\hspace{2cm}}$

4

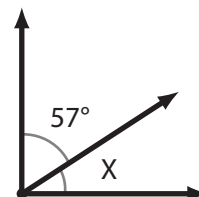

$m\angle X = \underline{\hspace{2cm}}$

5

$m\angle X = \underline{\hspace{2cm}}$

6

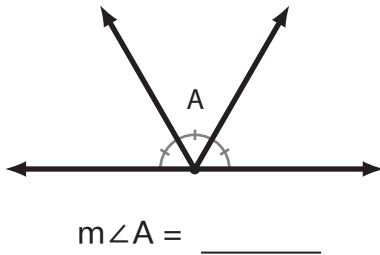

$m\angle X = \underline{\hspace{2cm}}$

## Finding an Unknown Angle - Set 3

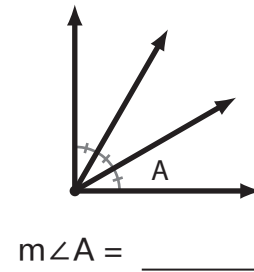

G-AAD 5

**Instructions:** Find the unknown angle (A). These problems are a little more tricky, so if you have trouble, ask someone for help or check the answer key to see the solutions.

- 1 This supplementary angle is divided into three **equal** parts.

- 2 This complementary angle is divided into three **equal** parts.

- 3
- 
- $m\angle A = \underline{\hspace{2cm}}$

- 4  $m\angle A = m\angle B$

## Angles and Degrees

**1** What is the size of this angle in degrees?

\_\_\_\_\_

**2** What is the size of this angle in degrees?

\_\_\_\_\_

**3** Find the unknown angle.

$\angle A$  and  $\angle B$  are complementary angles.  
If  $\angle A$  is 65 degrees, how big is  $\angle B$  ?

**4** Find the unknown angle.

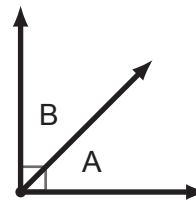

$\angle A$  and  $\angle B$  are supplementary angles.  
If  $\angle A$  is 35 degrees, how big is  $\angle B$  ?

**5** Find the unknown angle.

If  $\angle A$  is 128 degrees, how big is  $\angle B$  ?

**6** Find the unknown angle.

If  $\angle A$  is the same size as  $\angle B$ ,  
how big is  $\angle A$  ?

## Measuring Angles

## Comparing Angles

G-AAD 2

**Instructions:** Use the greater-than '>' and less-than '<' signs to compare these angles. (If you have trouble comparing the angles visually, you can use a protractor to measure them.)

1  $\angle B < \angle G$

2  $\angle J > \angle G$

3  $\angle M > \angle B$

4  $\angle T < \angle H$

5  $\angle J < \angle K$

6  $\angle J < \angle H$

7  $\angle T > \angle M$

8  $\angle K > \angle G$

9  $\angle G < \angle M$

10  $\angle T > \angle K$

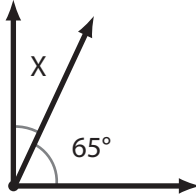

## Finding an Unknown Angle

G-AAD 3

**Instructions:** For each set of complementary or supplementary angles, find the unknown angle (X).

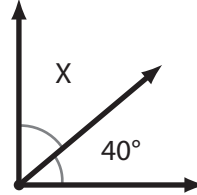

1

$$m\angle X = \underline{25^\circ}$$

$$\begin{array}{r} 8 \\ 90 \\ - 65 \\ \hline 25 \end{array}$$

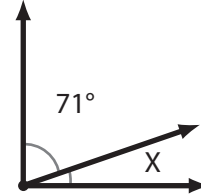

2

$$m\angle X = \underline{50^\circ}$$

$$\begin{array}{r} 90 \\ - 40 \\ \hline 50 \end{array}$$

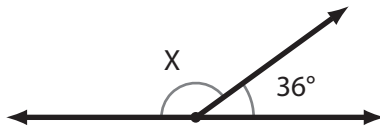

3

$$m\angle X = \underline{19^\circ}$$

$$\begin{array}{r} 8 \\ 90 \\ - 71 \\ \hline 19 \end{array}$$

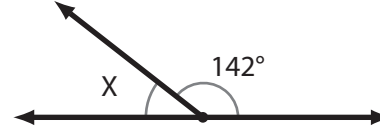

4

$$m\angle X = \underline{144^\circ}$$

$$\begin{array}{r} 7 \\ 180 \\ - 36 \\ \hline 144 \end{array}$$

5

$$m\angle X = \underline{38^\circ}$$

$$\begin{array}{r} 7 \\ 180 \\ - 142 \\ \hline 38 \end{array}$$

6

$$m\angle X = \underline{70^\circ}$$

$$\begin{array}{r} 180 \\ - 110 \\ \hline 70 \end{array}$$

7

$$m\angle X = \underline{85^\circ}$$

$$\begin{array}{r} 17 \\ 180 \\ - 95 \\ \hline 85 \end{array}$$

## Finding an Unknown Angle - Set 2

G-AAD 4

**Instructions:** For each set of complementary or supplementary angles, find the unknown angle (X).

1

$$m\angle X = \underline{103^\circ}$$

$$\begin{array}{r} 7 \\ 180 \\ - 77 \\ \hline 103 \end{array}$$

2

$$m\angle X = \underline{18^\circ}$$

$$\begin{array}{r} 7 \\ 180 \\ - 162 \\ \hline 18 \end{array}$$

3

$$m\angle X = \underline{37^\circ}$$

$$\begin{array}{r} 8 \\ 90 \\ - 53 \\ \hline 37 \end{array}$$

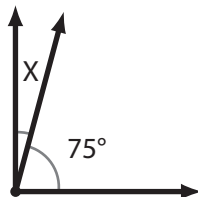

4

$$m\angle X = \underline{61^\circ}$$

$$\begin{array}{r} 8 \\ 90 \\ - 29 \\ \hline 61 \end{array}$$

5

$$m\angle X = \underline{15^\circ}$$

$$\begin{array}{r} 8 \\ 90 \\ - 75 \\ \hline 15 \end{array}$$

6

$$m\angle X = \underline{33^\circ}$$

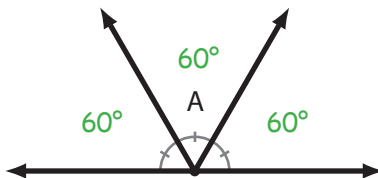

$$\begin{array}{r} 8 \\ 90 \\ - 57 \\ \hline 33 \end{array}$$

## Finding an Unknown Angle - Set 3

G-AAD 5

**Instructions:** Find the unknown angle (A). These problems are a little more tricky, so if you have trouble, ask someone for help or check the answer key to see the solutions.

- 1 This supplementary angle is divided into three **equal** parts.

$$m\angle A = \underline{60^\circ}$$

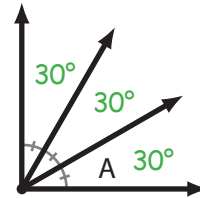

$$3A = 180^\circ$$

so

$$A = 180 \div 3$$

$$A = 60$$

- 2 This complementary angle is divided into three **equal** parts.

$$m\angle A = \underline{30^\circ}$$

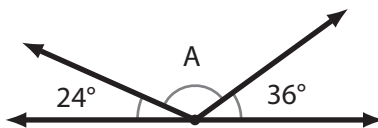

$$3A = 90^\circ$$

so

$$A = 90 \div 3$$

$$A = 30$$

3

$$m\angle A = \underline{120^\circ}$$

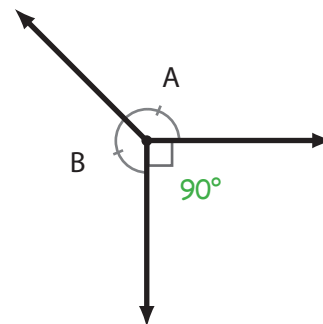

$$A + 24 + 36 = 180^\circ$$

$$A + 60 = 180^\circ$$

$$A = 180 - 60$$

$$A = 120$$

- 4  $m\angle A = m\angle B$

$$m\angle A = \underline{135^\circ}$$

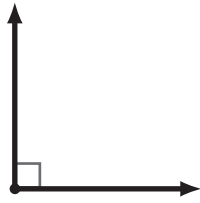

The total of A and B must be  $270^\circ$  because  $360^\circ - 90^\circ = 270^\circ$  (remember that a full circle is  $360^\circ$  and a right angle is  $90^\circ$ )  
And since we know that A and B are equal, A must be half of  $270^\circ$

$$A = 270 \div 2$$

$$A = 135$$

## Angles and Degrees

**1** What is the size of this angle in degrees?

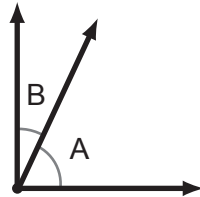

90°

**2** What is the size of this angle in degrees?

180°

**3** Find the unknown angle.

$\angle A$  and  $\angle B$  are complementary angles.  
If  $\angle A$  is 65 degrees, how big is  $\angle B$  ?

$$\begin{array}{r} 8 \\ 90 \\ - 65 \\ \hline 25 \end{array} \quad m\angle B = 25^\circ$$

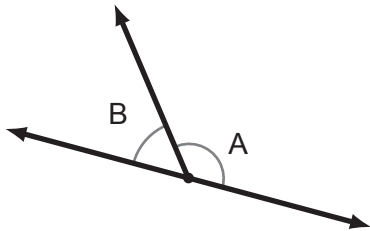

**4** Find the unknown angle.

$\angle A$  and  $\angle B$  are supplementary angles.  
If  $\angle A$  is 35 degrees, how big is  $\angle B$  ?

$$\begin{array}{r} 7 \\ 180 \\ - 35 \\ \hline 145 \end{array} \quad m\angle B = 145^\circ$$

**5** Find the unknown angle.

If  $\angle A$  is 128 degrees, how big is  $\angle B$  ?

$$\begin{array}{r} 7 \\ 180 \\ - 128 \\ \hline 52 \end{array} \quad m\angle B = 52^\circ$$

**6** Find the unknown angle.

If  $\angle A$  is the same size as  $\angle B$ ,  
how big is  $\angle A$  ?

If A and B are equal, then they must each be half of the total. Since they form a Right Angle, the total must be 90 degrees, so Angle A is half of 90, which is 45 degrees!

$$m\angle B = m\angle A = 45^\circ$$
